PATENTED ROSEBUSHES — BARE-ROOT

The finest roses grown in this country are produced in the cool, rich valleys of the Cascade Mountains in the State of Washington. The longer growing season, the cooler climate, produce huskier, hardier bushes and a more vigorous root system. All are 2-year-old, field-grown bushes.

PLANT BANDS—PAPER POTS

BIRD Paper Pots

VITA-POTS: Grow and ship in the same pot—saves labor and leaves root ball undisturbed. Nutrient treatment, so successful in Vita-Brands, has now been applied to this sturdy resinous pot. Reduces watering.

RED POTS: For shipping only. Not recommended for growing. Lightweight and sturdily made to protect root ball from breakage—inner wax coating prevents drying out. A must to preserve the top quality of your plants in transit.

VITA-M POTS: A new pot of molded pulp construction, closely resembling a clay pot in appearance and dimensions. Extremely lightweight but completely durable and unbreakable and can be reused many times. Its chief merit is that you can grow and ship in it!

BIRD VITA-BANDS AND FLATS

Vita-Band D

Contains root growth until grower chooses to let root through Band. Only quick, slight pressure is needed to crack Band. Do not remove Vita-Band D when transplanting. Band disintegrates in the soil permitting free growth of roots from time of transplant. Nutrient-treated with quickly available plant food.

Vita-Band 10

For short growing periods. Will usually contain root growth up to approximately 8 to 10 weeks. Nutrient-treated with quickly available plant food... your judgment determines need for additional feeding. Vita-Band 10 is identical to Vita-Band D except Vita-Band 10 is removed at time of transplant. Vita-Band D is not.

Vita-Band H

The new nutrient-treated successor that replaces Bird Vita-Band 40. Vita-Band H will control root growth of those plants which demand extra-long growing periods.

1-year-old grafts	\$10.00	\$ 85.00
2-year-old grafts	15.00	125.00

** DOUBLE PEONIES

While fall frequently is the recommended time for planting Peonies, spring planting can be equally successful, and many of our customers prefer spring planting, especially in the north, where heaving and winterkill frequently bring havoc to fall plantings.

The roots we offer have been carefully packed and held dormant in cold storage. They are single crown roots, not divisions of old worn-out plants. These thrifty 2 to 5-eye plants have been grown one year from single eye divisions and are extremely vigorous, healthy, free from disease and crown rot.

HARDY LILY BULBS

ONE OF THE LARGEST STOCKS OF LILY BULBS IN THE COUNTRY

Lily bulbs have long been one of our specialties, and we are pleased once again to offer our usual wide selection of old favorites, as well as some of the lesser-known, but equally desirable, varieties.

It is a common misconception that lilies can be planted successfully only in the Fall. While Fall planting is definitely beneficial in many respects, in the more northern states, Spring planting outdoors eliminates two great risks—Winter damage and the possibility of an outdoor crop's getting nipped by a late Spring frost. For, while all varieties are hardy, the foliage often is not! Only this past Spring we saw a fine stand of several hardy varieties ruined by a late frost that got the tender new growth. This would not have happened on a Spring planting.

Recent improvements in the handling and packing of Japanese lily bulbs have greatly increased their vitality and keeping powers, and the old stigma attached to these bulbs is no longer justified.

As a matter of fact, lily bulbs can be planted up until July, and a staggered planting of a case or two each month or every two weeks will provide the florist an almost continuous supply of blooms.

RARE AND UNUSUAL FLOWERING PLANTS

STRELITZIA REGINAE

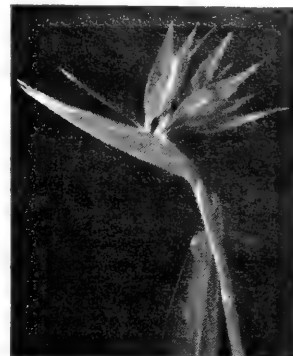

(Bird-of-Paradise)

AMERICA'S MOST EXOTIC FLOWER

Strelitzia Reginae has long been a stand-by of florists who have utilized the unusual flowers for the creation of strikingly different floral arrangements. More recently it was brought to the attention of gardeners when the city of Los Angeles voted it the city flower. Naturally it thrives outdoors in California and in our more temperate states, but in the northern states it is primarily a pot subject.

The flowers are a gorgeous arrangement of hues of red, yellow, blue and orange, borne on strong stems, and extremely long lasting when cut. The plants themselves are extremely attractive, producing leaves of light green texture in the early stages.

Handy Colored Lithographed Tags are available on the wrapped plants, showing on one side the flower in full color; on the reverse are given the planting instructions. The plants are carefully wrapped in moist sphagnum moss in attractive silver foil and can be held for a month or more.

CLIVIA MINIATA

Clivias make excellent house plants (although we know one producer who grows and sells the cut flowers). They have broad dark green straplike leaves that are evergreen the year round and most attractive. They bloom in the late spring or early summer. Thick flower spikes produce large umbels of orange-red blooms. Clivias are actually members of the Amaryllis tribe, but have the advantage over Amaryllis of being easier to flower and having evergreen foliage.

\$15.00 per 10; \$125.00 per 100.

ANTHURIUM ANDRAEANUM

An unusual plant, producing flowers of great and lasting beauty. Sometimes called Jack-in-the-pulpit, actually the name Anthurium is Greek for "Tail Flower," so-called because of the long spadix which protrudes from the shiny parchment-like flowers, which come in brilliant shades of red and pink. The incredulous amateur, upon seeing the flower, is invariably compelled to touch it to convince himself it is actually a real flower. We ship plants in bud. Pink or red.

\$15.00 per 5; \$25.00 per 10; \$50.00 per 25.

INSECTIVOROUS PLANTS

These native plants are of great interest and of considerable beauty. They are variously called PITCHER PLANT, VENUS'S-FLYTRAP, COBRA ORCHID, etc. They grow wild from northern Florida to Labrador, and it is strange they are not more common in commercial horticulture, as they make an interesting pot plant for the home—certainly an unusual conversation piece. They can also be planted in the garden. Space prohibits a detailed account of the chemical actions that attract flies and insects to these plants, but full details on growing accompany the plants.

Darlingtonia. Crimson and green, mottled white. May require some protection in really cold climates. A fine pot plant.

Sarracenia Purpurea. Flowers green when grown in shade; dark purple when grown in full sun. Very hardy.

ABOVE: \$1.25 each; \$10.00 per 10.

BROMELIAD—Air Plants

Also called Jewel Ginger, or Red Vase Plant, these Bromeliads are imported from Mexico and are strikingly different. While they will exist with occasional sprinkling of the leaves, they will do better if placed in a vase of water. Potted in soil, they will sometimes actually root. The lush foliage is attractively variegated; the flower a huge bright red cone.

\$10.00 per 10; \$90.00 per 100.

HOLLAND-GROWN DAHLIAS

We cannot recommend too highly the following Imported Dutch Dahlias. The florist will find many fine cut flower varieties. (We have seen individual blooms retail at 50 cents each.) The landscape artist will find they give early, abundant and long-lasting color and will be especially pleased with the Mignon and Miniature Types, most of which require no staking! The seedsman and dealer should try the Collection for Counter Sales, as the striking pictures really sell Dahlias.
